Frontend

HTML5 · CSS3 · JavaScript (ES6+) · TypeScript ·
React · Tailwind CSS · Responsive Design

Backend

Node.js · Express.js · REST API Design · JWT
Authentication

Database

MongoDB · Mongoose

Tools

Git & GitHub · VS Code · npm · Postman · Chrome
DevTools

LANGUAGES

Persian — Native

English — Intermediate

PROFILE

Self-taught junior full-stack developer from Varamin, Tehran, with a strong foundation in JavaScript, TypeScript, React, Node.js and MongoDB. I learned to code on my own — through online courses, official documentation and building real projects — and I practice every day. I enjoy turning ideas into clean, working web applications and I am looking for my first professional role as a junior developer, on-site in Tehran or remote. I write readable, maintainable code, communicate clearly, and I am used to figuring things out on my own before asking for help.

PROJECTS

Portfolio Website

PERSONAL PROJECT

React Vite Tailwind CSS Node.js Express MongoDB

Personal portfolio platform built from scratch — frontend and backend, with an admin panel.

React + Vite, Tailwind CSS, shadcn/ui and Framer Motion; animated dot-grid hero; fully responsive.

Bilingual interface (Persian / English) with a light/dark theme switcher.

Node.js + Express REST API with JWT admin authentication, MongoDB, image upload and a contact form.

Source code: github.com/RezaParadox/my-portfolio

Full-Stack Blog

PERSONAL PROJECT

React Node.js Express MongoDB JWT

Complete blog platform built from scratch, frontend and backend.

User registration and login with JWT authentication and role-based access (admin / author / reader).

Post publishing and management with a rich text editor and image upload.

Comments, categories & tags, search and pagination — served by a clean REST API.

Responsive, mobile-first interface.

EDUCATION

Self-Taught Developer

No formal degree — I built my skills on my own.

Learned through structured online courses, official documentation and hands-on projects.

Daily practice: algorithms, clean code, and building and debugging real applications.

Constantly learning — currently deepening my TypeScript and backend skills.

Currently exploring Next.js, PostgreSQL and Docker to grow beyond the MERN stack.
